COMMENTS

Please note that the free service for analysing samples from animals suspected to be infected with the above-mentioned viruses is available for up to 50 samples per country per year (except by prior agreement) and testing is carried out on behalf of the national regulatory authority, to whom results will be copied. OIE / FAO will also be informed. Samples, virus isolates and deduced characteristics of the samples, such as genetic and antigenic data may be passed to others in order to facilitate international disease control and for the purpose of research into the development of improved disease control capabilities.
